Import notifications for fisheries and aquaculture products with an AMR perspective

Esther Garrido Gamarro, Fishery Officer, FAO

prepared in collaboration with Giulia Loi

Antimicrobial Resistance: AMR

- Antimicrobial resistance (AMR) is a major global threat of increasing concern to human and animal health.
- It also has implications for both **food safety** and **food security** and the **economic well** being of millions of farming households.
- **Food** plays an important role in the development and spread of AMR.
- The presence of AMR microorganisms in agricultural production systems and food chains is a potential route of exposure for everyone.

AMR and fish safety

- Ingestion of AMR organisms via food can, if they are pathogenic, result in human illnesses that might not respond to available antibiotic or other treatments.
- Example: in freshwater fish, antibiotic resistance has been observed to tetracycline (90.71%) followed by ampicillin (70%) and amoxicillin-clavulanic acid (45%) in *Salmonella spp* (Elhadi, 2014).

What accelerates the emergence and spread of AMR?

Poor infection control, inadequate sanitary conditions and misused of antimicrobials among others

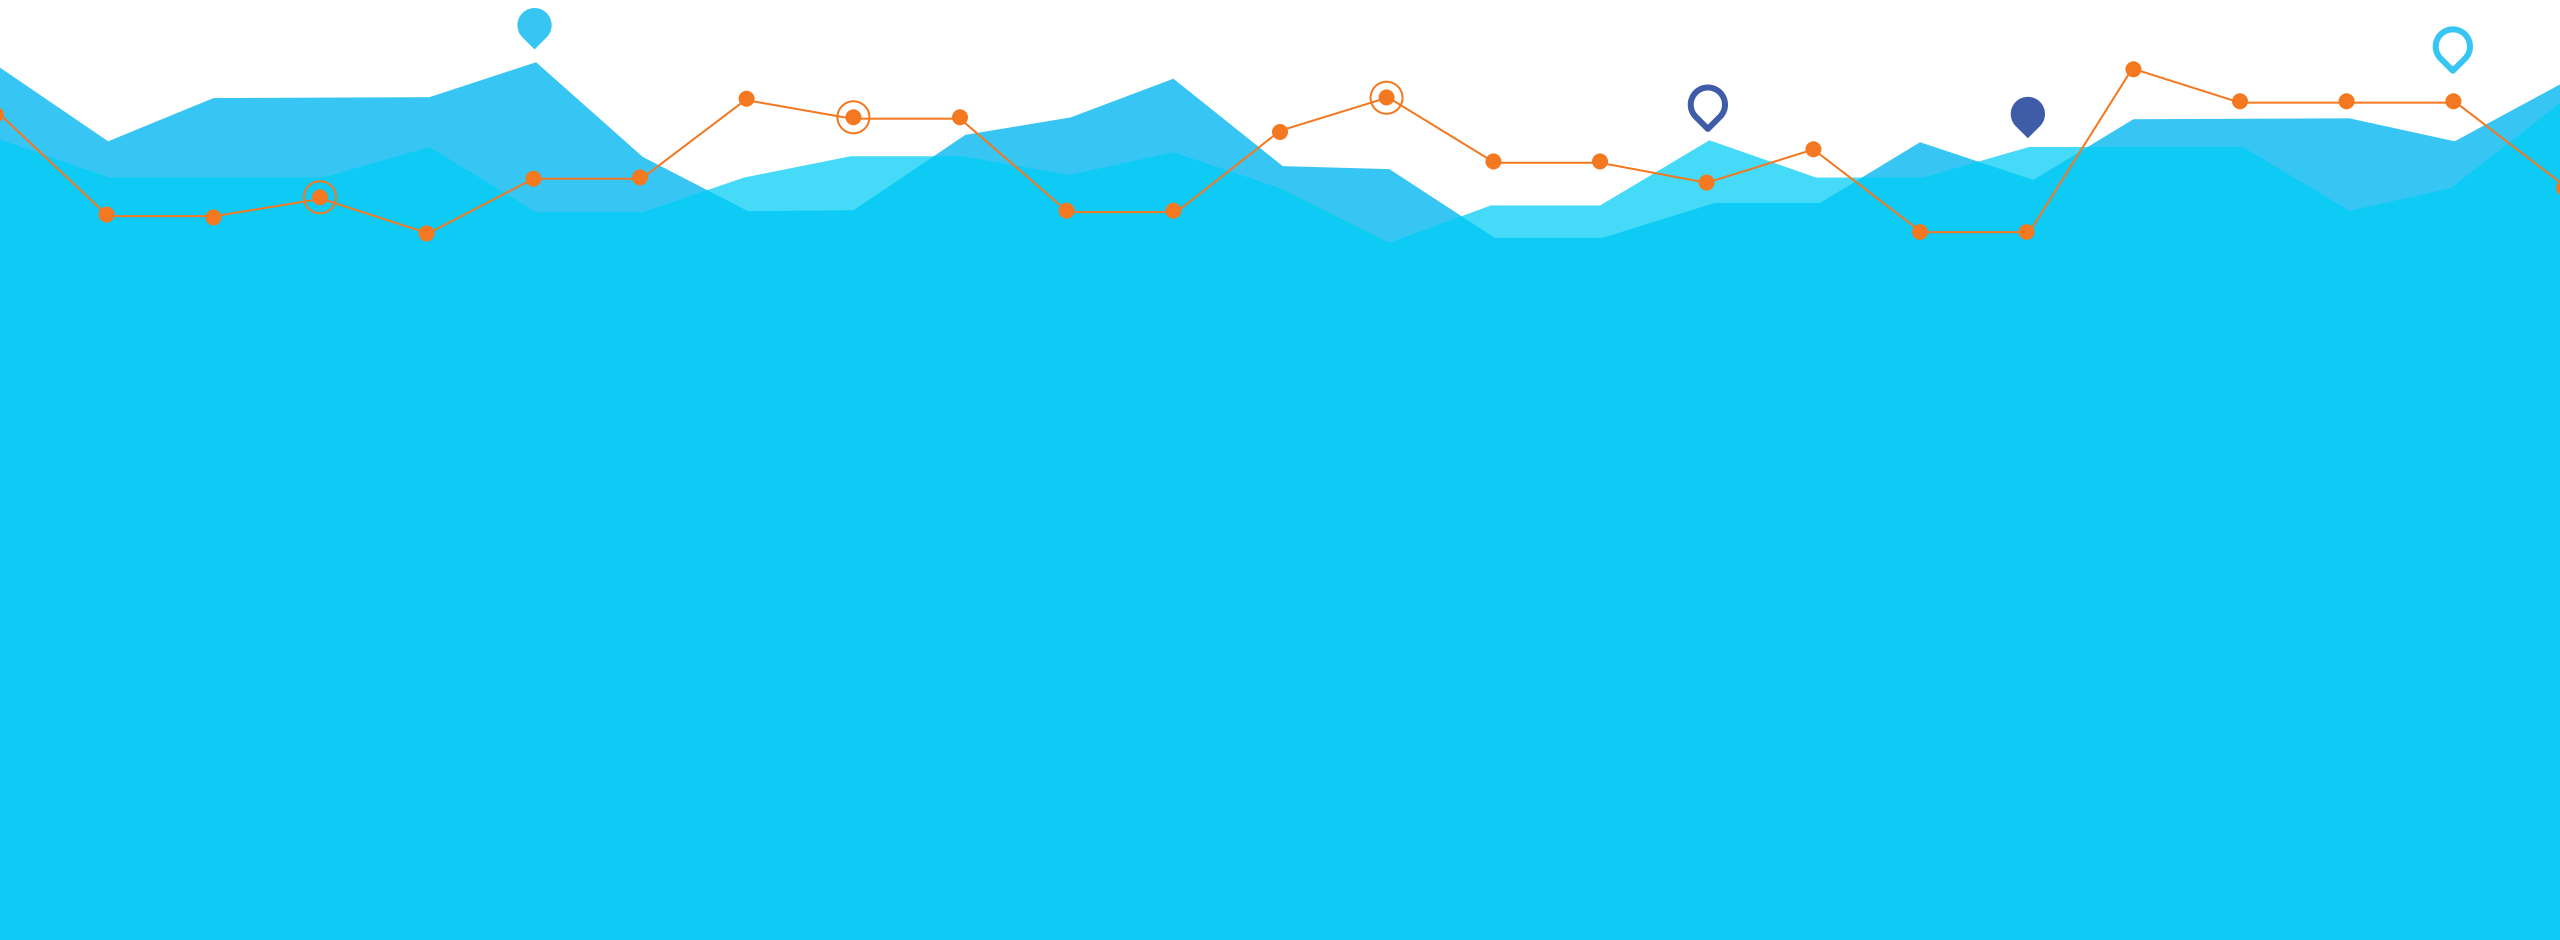

Drivers for antimicrobial resistance

- Human antimicrobial misuse or overuse
- Animal antimicrobial misuse or overuse
- Environmental contamination
- Health-care transmission
- Suboptimal rapid diagnostics
- Suboptimal vaccination
- Suboptimal dosing, including from substandard and falsified drugs
- Travel
- Mass drug administration for human health

(Alison H Holmes, 2015)

Analysis of import notifications in fisheries and aquaculture products in the European Union, Japan and the United States of America

Food and Agriculture

United Nations

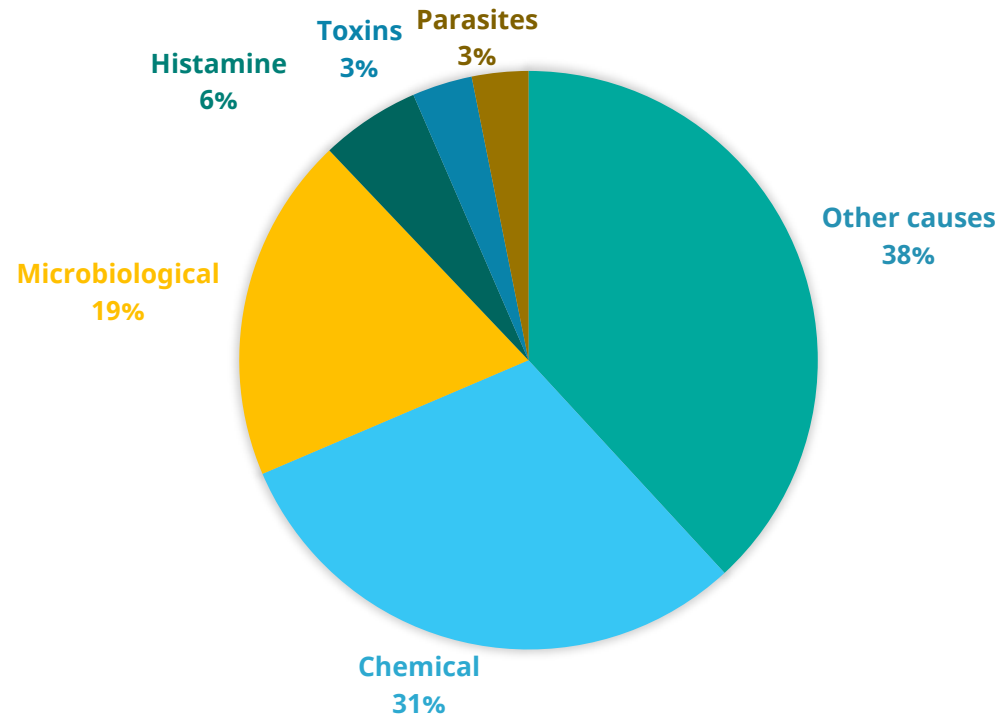

Classification of import notifications

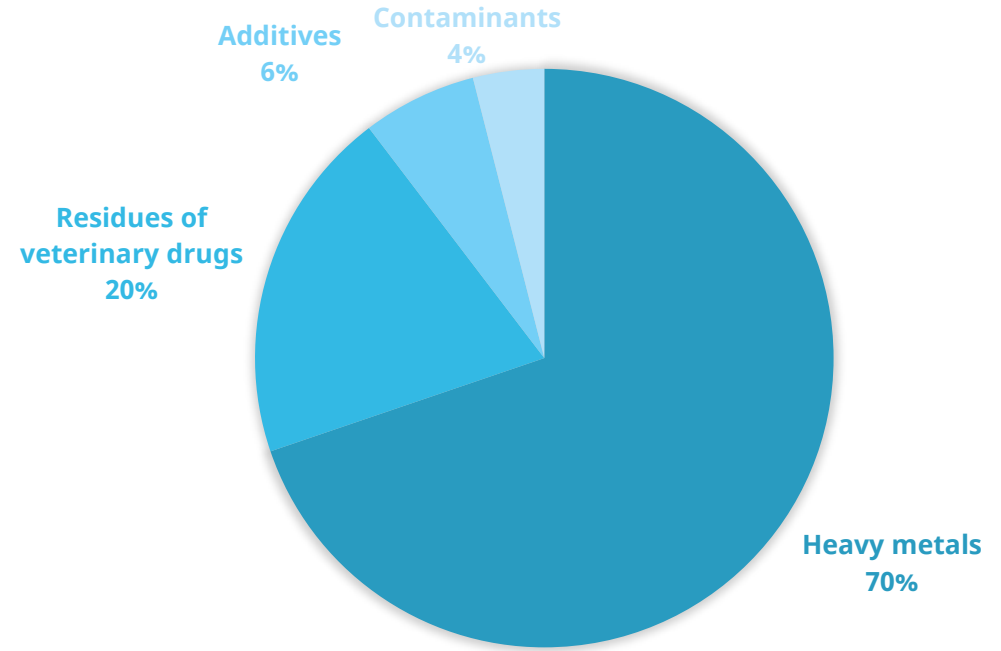

Import notifications in the European Union

Trend analysis 2016 - 2022

Source: European Commission, 2022

Source: European Commission, 2022

Under the residues of veterinary drugs, 62 import notifications of the total 74 cases were due to the presence of antimicrobials, representing 84 percent of the import notifications due to residues

Import notifications due to the presence of antibiotics in the European Union

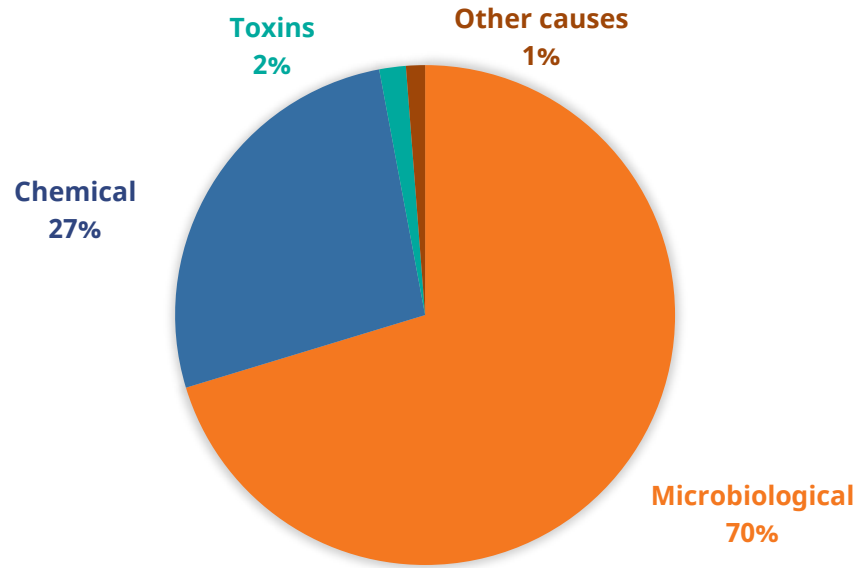

<i>Notified antibiotic in the European Union</i>	<i>2016</i>	<i>2017</i>	<i>2018</i>	<i>2019</i>	<i>2020</i>	<i>2021</i>	<i>2022</i>	<i>Total</i>
<i>Nitrofurans</i>	8	17	13	3	4	3	3	51

Overall conclusions and recommendations

- Importance of a “One Health” approach
- Importance of harmonized standards for the use of antimicrobials and for the establishment of MRLs
- Need to reduce the use of antimicrobials
 - Good aquaculture practices
 - Alternative strategies (vaccinations, probiotics, bacteriophages and herbal extracts, etc.)

FishStatj - Software for Fishery and Aquaculture Statistical Time Series

FishStatj is a Windows and Mac application that anyone can use to access FAO's Fisheries and Aquaculture statistics. They include datasets on production, trade and consumption. Data can be extracted and aggregated according to different level of details and international standard classifications. It consists of a main application and several workspaces that include the datasets.

Global production workspace:

- Global Production by production source 1950-2021 (Release date: March 2023)
- Capture Production 1950-2021 (Release date: March 2023)
- Aquaculture Production (Quantities and values) 1950-2021 (Release date: March 2023)

- Provides guidance for the design and implementation of a food control e-notification system.
- Includes the system's legal basis, its structure and operational parameters, as well as its infrastructure and human resource requirements.

RISK BASED IMPORTED FOOD CONTROL MANUAL

It aims at supporting competent authorities in improving the effectiveness of the control measures they are overseeing, based on an analysis of their specific country situation.

It discusses the different types of approach to managing risks related to imported food, and provides concrete illustrations of how Codex guidelines can be implemented in different ways.
